

PRESS RELEASE

Continued Growth: Nash Technologies Opens New Office in Munich

MUNICH, Germany, July 01, 2017, Nash Technologies, a vendor-independent provider of solutions in software systems and communications, today announced the opening of its new office in Munich. This happens only two years after the opening of the subsidiary in Böblingen and reflects the sustained growing demand for vendor-independent solutions in software systems and communications. The branch in Munich will officially start operations on July 17, 2017 offering Nash Technology's full portfolio and serving all our markets: telecommunications, automotive, transportation, semiconductors, and other digital industries.

The new office is located 5 km east of downtown Munich at the following address:

Nash Technologies Stuttgart GmbH
Neue Messe Riem
Kronstadterstr. 4
81677 München

It can easily be reached by car via the city highway BAB 94. Public transport is within walking distance. Several hotels and restaurants are in the immediate neighborhood.

Software has become a ubiquitous component of everyday life, from making a phone call or using the Internet to driving a car and even the development of the digital infrastructure itself. The software market is expanding in both breadth and depth. Enterprises in all kinds of industries who develop their digital business by relying on premium external services and solutions require geographical proximity.

"Our objective is to be present in all technology hubs in Germany, close to our customers. After having opened two offices in the Stuttgart metropolitan area we are now happy to be present in Munich as well", says Udo Nadolski, CEO of the Nash Technologies Group. "We have now a footprint in all high-technology regions in Germany and are glad that we can support the further growth of our clients, foremost our strategic partner Advantest, who has a strong presence in Munich."

About Nash Technologies

Nash Technologies provides vendor-independent solutions in software systems and communications: embedded, high-available and near-real-time. We serve telecommunications, automotive, transportation, semiconductors, and other digital industries. Our company is based in Nuremberg, Germany, with offices in Stuttgart, Böblingen, Munich and Cologne. Due to our extensive experience with complex software solutions, we are specialized in the development of mission-critical, high-available, and time-critical applications. We cover the complete software and product life cycle, from early conception to after-sales support. We provide our services mainly in the project mode as contract for work or contract for service: often as fixed price covering all project risks. We also support our clients' projects as a consultant or specialist with expert knowhow.
