PRESS RELEASE

Nash Technologies Germany Open New Office in Böblingen

BOEBLINGEN, Germany, July 12, 2022, Nash Technologies, a globally leading company in software development in embedded environments and ATE engineering in the field of semiconductor testing today celebrated the opening of its new office in Böblingen, Germany. It is an open plan office with more than 1200 square meters providing room for over 80 employees. A special lab-room will soon be hosting our own V93000 tester which will enable us to handle more turnkey projects for our semiconductor customers.

At the same time our office in Stuttgart-Weilimdorf was closed. Our IT-Team managed to move our computing center from Stuttgart-Weilimdorf to Böblingen successfully in time. After the official speech of Georg Pielage, CEO of Nash Technologies, each employee got a brand-new Nash Tech hoodie. At the party which followed suit all employees and guests had the chance to enjoy the pleasant ambient of the business park to which our new office belongs to.

“This new office reflects our determination to further grow our semiconductor business. The market demand continues to be high”, says Georg Pielage, CEO of Nash Technologies. “We expect our first own V93000 test system to be installed in our lab by the end of this year. This will allow us to accept more turnkey projects and to facilitate efficiency gains.”

About Nash Technologies

Nash Technologies specializes in software development in embedded environments and ATE engineering in the field of semiconductor testing. We are located in Boeblingen, Germany, with offices in Nuremberg and Cologne, as well as in Rome and Milano, Italy. Our customers are leaders in the semiconductor, railway, automotive and telecommunications industries. We deliver complete projects, provide competent experts, develop customer-specific solutions, and offer professional services. We are active throughout Europe, with a regional focus in Germany. As a strategic partner of Advantest Europe in the areas of application engineering and product development, we contribute to the further development of innovative technologies and solutions for the semiconductor industry.
